

Totem

Sky Tower floorstanding loudspeaker

Reviewed in Issue **162**

The Sky Tower purports to take the best traits of the Sky Monitor and brings Totem Acoustic's signature sound to those who are interested in owning a high quality and affordable floorstanding speaker.

A two-way design using a 3.3cm laser etched textile soft dome tweeters and 146mm woofer with copper capped voice coil, the Sky Towers share the understated and elegant design that Totem has come to be identified with across their line-up of speakers. One special feature small dwelling listeners will find particularly appealing is Totem encourages the Sky Towers to be placed close to your back wall, making them ideal for small listening rooms or shared spaces where large free-space loudspeakers are a no-no.

"The Sky Towers effortlessly weaved a truly enormous soundstage that seemed to be unfairly contained only by the walls of the room," said Buzz Hughes of the Totems. "The rippling soundstage was delightfully untethered to the physical location of the floorstanding towers." He added that, "Background banter and cues being passed between band mates or the previously unheard scraping of a chair on a floor quickly became common place with the Sky Towers and allowed a new level of immersion in the music," and concluded, "The Sky Towers offer a rounded and complete delivery with enough finesse and detail to allow you to joyfully rediscover your music collection all over again." +
